

DEKO FV GLASS

99.9% GLAZED
FOLDING PARTITION

The transparent, fully glazed folding partition makes it possible, for example, to divide large units into smaller ones, where there is no immediate requirement for a high level of sound reduction or fire rating. DEKO FV Glass can be installed together with solid partitions or supplement the DEKO FG fully glazed partition. The solution makes it possible to achieve an entire interior of single glazed partitions.

PROPERTIES

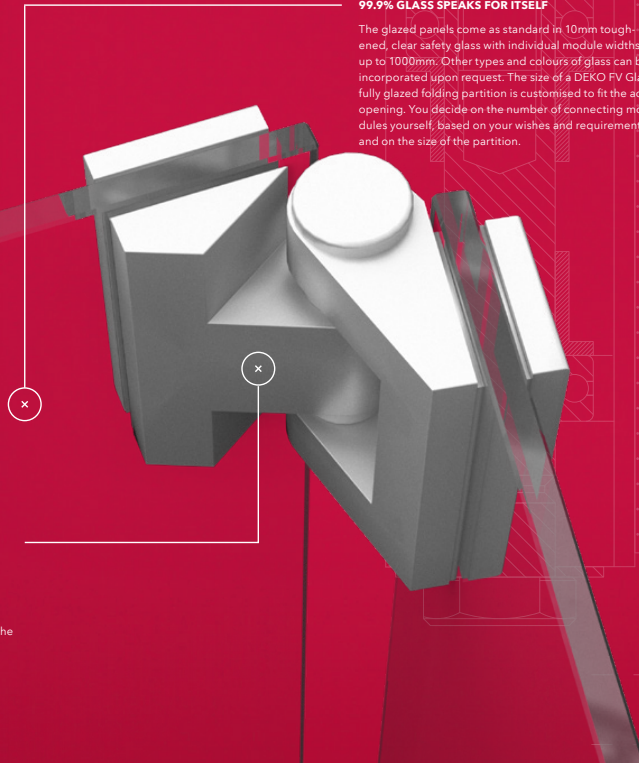

- Top-hung
- The size of the glazed folding partition is customised to suit requirements
- Safety glass
- Hinged panels for easy operation
- Built-in door module
- Locking option
- Film application as required

GLAZED FOLDING PARTITION

Small trims complete the minimalist design

99.9% GLASS SPEAKS FOR ITSELF

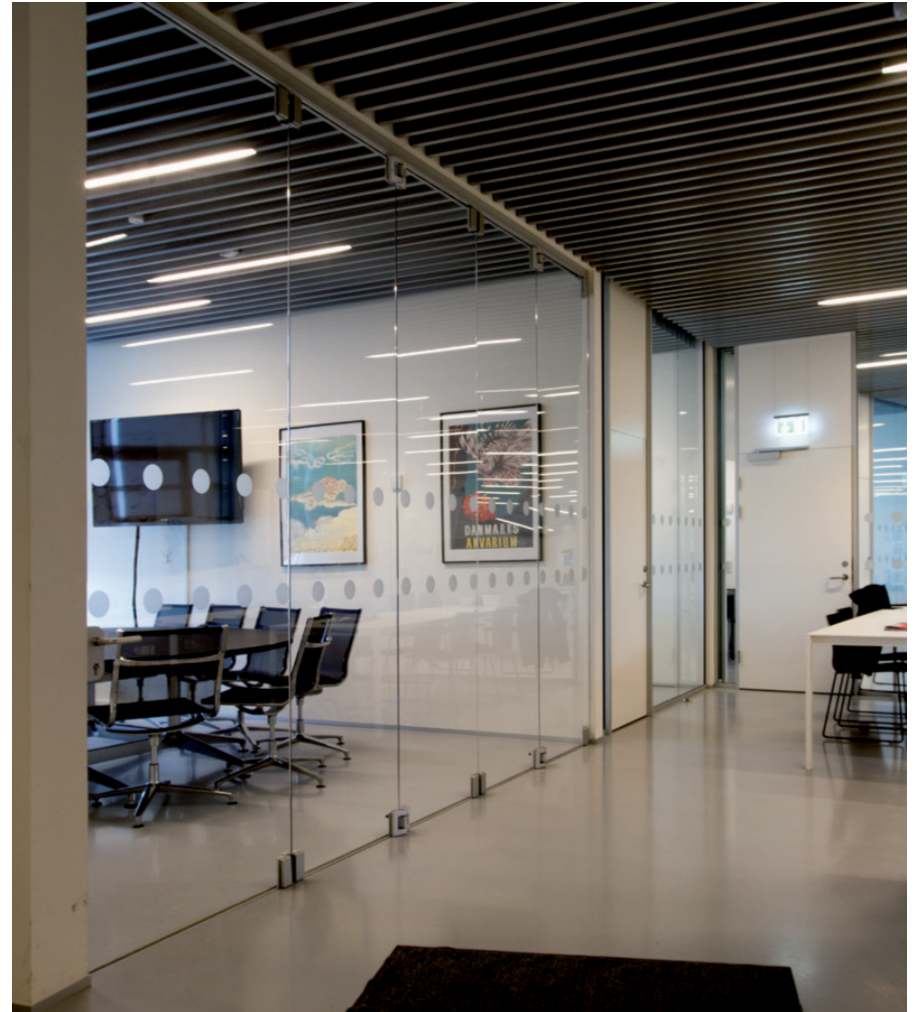

The glazed panels come as standard in 10mm toughened, clear safety glass with individual module widths of up to 1000mm. Other types and colours of glass can be incorporated upon request. The size of a DEKO FV Glass fully glazed folding partition is customised to fit the actual opening. You decide on the number of connecting modules yourself, based on your wishes and requirements, and on the size of the partition.

TRIMS THAT MAKE THE PARTITION ALMOST INVISIBLE

The small trims are specially designed and come as standard fitted in the corners of the glazed panels. The trims are exclusive and help make the partition almost invisible.
