

DEKO FV2 GLASS

DOUBLE GLAZED FOLDING PARTITION WITH HIGH ACOUSTIC PERFORMANCE

Do you need open, light rooms with flexible folding partitions, as much glass as possible and a high level of sound reduction? Then there is no doubt that DEKO FV2 Glass is the perfect solution. DEKO FV2 Glass is constructed individually according to the dimensions of the glazed panels you require, taking into account the size of the partition. The folding partition comes either with single or double leaves joined in the centre. The structure is unique, consisting of aluminium profiles and two layers of glass, which extend right to the edge of each panel. Together the components provide an attractive, maximum glazed area and an impressive 47 dB of sound reduction.

PROPERTIES

- The size of the glazed folding partition is customised to suit requirements
- Hinged elements for easy operation
- Built-in door module
- Film application as required
- Sound tested
- Glass to the edge, covering the aluminium frame
- Safety glass
- Frames in various colours
- Easily wipeable surface

DOUBLE GLAZED FOLDING PARTITION

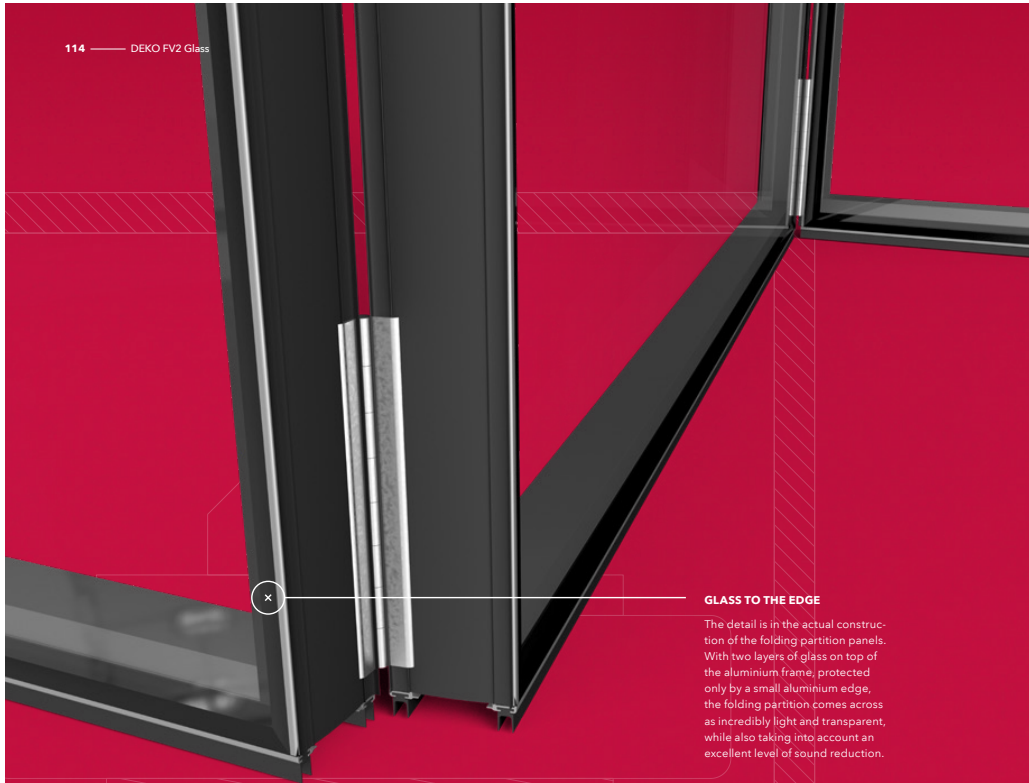

High level of sound reduction

This elegant double glazed folding partition does not only divide a room in a simple and minimal way, it also contributes to sound reduction of up to 47 dB.

LET THE LIGHT IN

The flexible glazed partitions create a fully transparent look and easily divide a room into smaller units.

**GLASS TO THE EDGE**

The detail is in the actual construction of the folding partition panels. With two layers of glass on top of the aluminium frame, protected only by a small aluminium edge, the folding partition comes across as incredibly light and transparent, while also taking into account an excellent level of sound reduction.

DOUBLE GLAZED FOLDING PARTITION

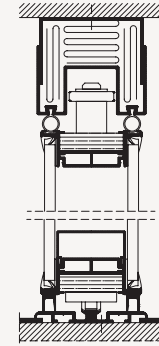

Glass on the entire surface

Two layers of glass are fitted on top of the minimal aluminium frame with no visible screws. This ensures a high level of sound reduction and an elegant look with maximum flow of light, and the same glazed surface on the entire surface of the partition.
