

## DEKO MV GLASS

99.9% GLAZED  
PANEL WALL

With its single layer of glass, this flexible panel wall is particularly suitable for indoor shop façades, canteens and workplaces which demand a high level of flexibility.

The fully glazed panel wall comes as standard with toughened safety glass and is fitted with natural anodised aluminium tracks at the top and bottom. With each glazed panel operated and locked individually, a variety of stacking options are available. Stacked panels create a compact unit with minimal effect on finished opening size.
